• 3.Start OCR recognition

After finish OCR, the text recognized by would automatically fill into `UyghurEdit++` text edit area.

- 3. Come here the OCR mission finish. But this tool also get very cool features which could check and correct Uyghur spells. If a Uyghur word is miss-spell, the software would underline with a red dash line, means the word is miss-spells. To correct spells just click that miss-spelled word, then the software would give suggestion word pop-ups, just select correct word, finish spell correction. After spell correction the miss-spell underline disappear.
